

# Appleton Village Surgery relocation consultation

# From and to...

Proposed new surgery site (on the entry to the car park before the Co-op)

Present surgery site

# Our present site

# The proposed new site

# **We want to relocate because...**

It's based around two 1900s terraced houses, plus a semi-detached 1920's villa

Our existing premises are in buildings which are over 100 years old

The buildings were converted into a surgery in 1976, resulting in irregular shaped rooms, accessed by narrow winding corridors

# **We want to relocate because ...**

Parking is on street or in the public car park across the road

Difficulty recruiting medical staff

The rooms have poor sound insulation and poor temperature regulation

Three of the consulting rooms are situated upstairs with no disabled access

## We want to relocate because ...

The premises operate at 98% capacity. All downstairs clinical rooms are in constant use, so there is little opportunity to extend our services

We are a training practice, and the building layout makes supervision of junior doctors difficult for the trainers.

The building is old and difficult to maintain

# Our proposed new premises will...

Be purpose built

Have the potential to offer more services in the future

Be a modern and well maintained space for patients

# Our proposed new premises will...

Have better facilities for staff, including teaching facilities for trainees

Support recruitment of medical staff to ensure the development and delivery of services now and for the foreseeable future

Have better access with a lift to the first floor and car parking on site
